

# Sample Tray Art

Inspired by:

**wellcome  
connecting  
science**

This week, the children have been exploring Science, Technology, Engineering and Maths (STEM) through an activity inspired by a local STEM institution.

The children were challenged to make different art works by carefully pouring coloured liquids into 'well culture' trays, developing their fine motor and artistic skills. This reflected the careful placement of samples into test plates done by medical scientists and the geneticists at the Wellcome Trust – the place the human genome was first decoded.
